

JERSEY BARRIER

The Thiessen Team Jersey Barrier is designed for mining applications. Steel re-enforced core, structural fiber re-enforced concrete and a wider base for stability, is the make-up characteristics for the Thiessen Team Jersey Barrier to meet any required demand.

Anchoring cables span the length of the Jersey Barrier and fork pockets are a standard inclusion for ease of mobilization and relocation.

The Thiessen Team Jersey Barrier is poured from moulds at the plant in Elko, NV.

SPECIFICATIONS

Length 120"
Width 36"
Height 30"
Weight 6,700lbs
