# TC SERIES Hydraulic Compactors

*The unique design of Breaker Technology's TC Series of hydraulic compactors delivers high impulse energy for superior compaction. Five models satisfy a wide range of compaction applications and customer needs.*

## **Features & Benefits**

### **High Performance, Low Maintenance**

The motor design requires minimal oil flow leaving sufficient oil for effective boom movement. Optional high or low flow motor configurations allow you to match the motor to your specific hydraulic requirements. Flow control valves, standard on the TC51 and optional on the TC71, protect the rotating group from over-speeding, ensuring optimum operating speeds by returning excess flow to the tank.

High frequency operation and high ground pressure are standard to achieve maximum proctor densities and high lifts.

Internal anti-cavitation valves permit the motor to slow down safely after shutting off the control valve, eliminating shock loading to the rotating group.

### **Oil Bath Lubrication**

Oil bath lubrication ensures continuous bearing lubrication and eliminates the need for manual greasing.

### **Rubber Isolators**

Large rubber isolators prevent vibration in the upper structure, delivering maximum energy through the base plate and into the soil, providing excellent proctor densities.

The TC92 and TC152 lattice design places the isolators in compression not in shear. This extreme duty lattice design excels in continuous compacting applications, helping to resist extreme downward force while providing optimum dampening.

### **Bracket Options**

Mounting brackets range in variety of configurations, including dedicated, swivel and variable pin center (QA), to meet most interface requirements.

### **Swivel Top Mount**

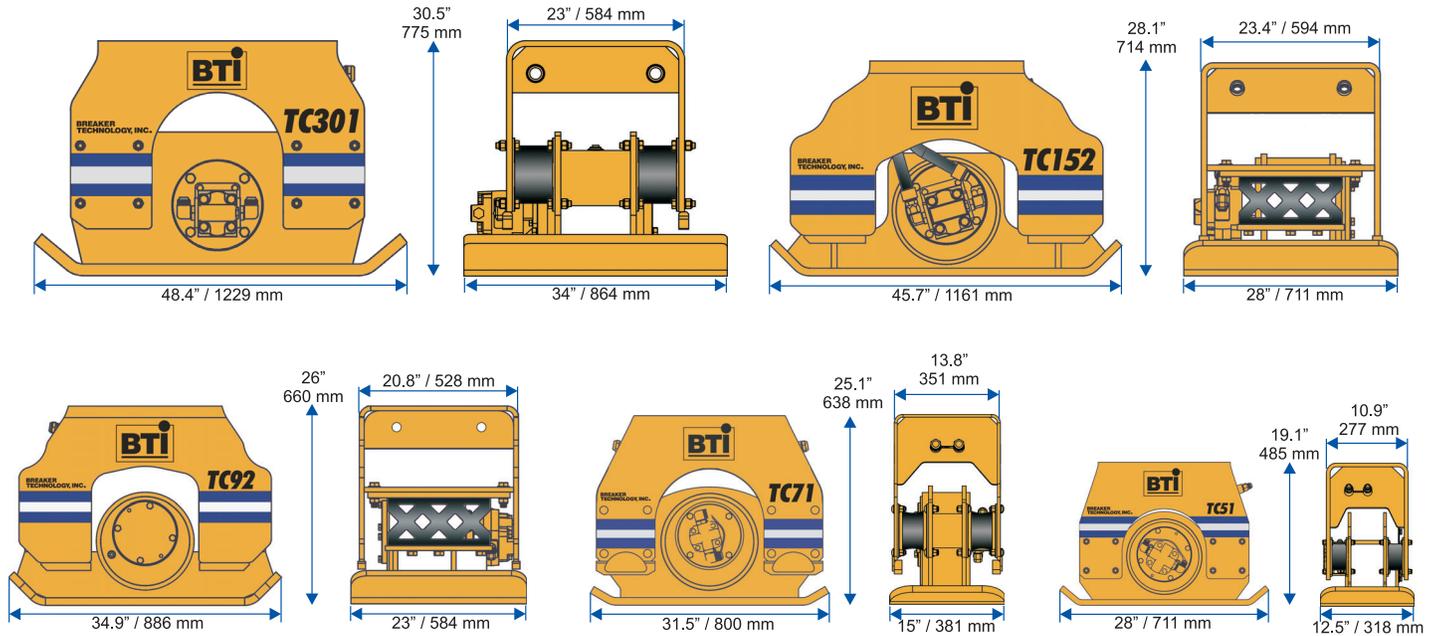

Swivel top mounts are available on the TC71, TC92 and TC152 compactors. Controlled compaction is achieved by locking the swivel mount in different positions of 45 degree increments. By removing the pin, the compactor can "free float".

### **Universal Adjustable Boss**

Both the QA Swivel and QA Non-swivel mounts come with BTI's unique adjustable boss mounting system which allows adjustment of the pin spacing to accommodate quick-coupler installations on most common rubber tire backhoes.

	bar	78	59	78	85	83	135	101	126	92
Max. Relief Valve Setting	psi	2,800	2,800	2,800	2,800	2,800	2,800	2,800	2,800	2,300
	bar	193	193	193	193	193	193	193	193	159
Recommended Relief Valve Setting for all models:		2,000 psi / 138 bar								
Maximum Continuous Return Line Pressure for all models:		245 psi / 17 bar (Maximum return line pressure at constant operating speed)								
Maximum Intermittent Return Line Pressure for all models:		490 psi / 34 bar (Maximum intermittent return line pressure during acceleration & braking)								

-L = Low Flow Motor -H = High Flow Motor /FC = Flow Control

All dimensions and specifications are approximate and subject to change without notice.

<sup>1</sup> Approximate weight may differ due to mounting configurations.

<sup>2</sup> Flow rate determined at 93% volumetric efficiency. Operating pressure assumes 150 psi line loss and 93% mechanical efficiency - actual conditions may vary.

## Non-swivel Dedicated

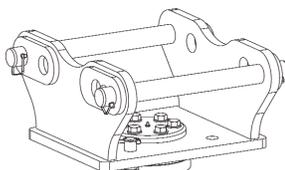

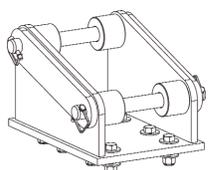

Available for all models.

Also available:

Swivel Dedicated

- TC71, TC92 & TC152

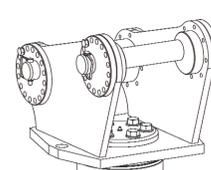

Non-swivel ME - TC51 & TC71

## Two-pin Swivel

Available on TC152.

Two-pin Non-swivel is available for TC152 and TC301.

## QA Swivel

Available for TC71, TC92 & TC152

QA Non-swivel is also available for TC71, TC92 & TC152

Brackets are complete with pins, collars and bushings. Consult factory for custom brackets and multiple OEM pin centers.
